Art Unit: 3677

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-17, drawn to an interlocking attaching system, classified in class 24, subclass 580.1.

- II. Claims 18-21, drawn to a substrate adapter, classified in class 24, subclass 578.1.
- III. Claims 22-24, drawn to an accessory adapter, classified in class 24, subclass 573.11.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the broadest combination claims do not require that the substrate adapter have a second loop column formed on the base and comprised of a plurality of loops disposed at spaced apart locations along a column axis and oriented so as to define a common passage therethrough, with the second column axis parallel to the first column axis. The broadest combination claims only require one loop column and are evidence claims indicating that restriction would be proper. The subcombination has separate utility such as a lace guide for a lace threaded through the plurality of loops and thereby securing an accessory object to a substrate via the lace fastened to the accessory object and passing through the loops of the substrate adapter, which is attached to a substrate.

Art Unit: 3677

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the broadest combination claims do not require that the accessory adapter have at least one second component of the latching mechanism, the second component of the latching mechanism being disposed on the base in association with a particular loop column for releasably securing the locking member in a predetermined position of engagement with the accessory adapter when the locking member is inserted into the common passage of the respective loop column. The broadest combination claims only require the capability of insertion of the locking member through the loops of the accessory adapter and no locking mechanism on the accessory adapter and are evidence claims indicating that restriction would be proper. The subcombination has separate utility such as a receiver of a locking member fastened to and extending from a substrate so that the accessory adapter functions to secure an accessory object to a substrate without any substrate adapter.

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a lace guide for a lace threaded through the plurality of loops and thereby securing an accessory object to a substrate via the lace fastened to the accessory object and passing through the loops of the substrate adapter, which is attached to a substrate. See MPEP § 806.05(d).

Art Unit: 3677

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II nor for either for Group III, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James R. Brittain whose telephone number is (703) 308-2222. The examiner can normally be reached on M-F 5:30-2:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, J. J. Swann can be reached on (703) 306-4115. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
